Bronzer without talc

Photo: ImaxtreeWhen it comes to faking a year-round tan, bronzer is your best friend. And when you're chalking this light, shiny powder in all the right places on your nose, chin, cheeks and forehead, you want to make sure it's filled with just great ingredients. That brings us to Talc. Mainly used in cosmetics for its moisture absorption properties, improved textures and formula filling, talc is a controversial ingredient found in much of our makeup. But it's also used to give your bronzer an opaque finish that sits slightly on your skin without caking. The problem is that this ingredient has long been linked to some forms of cancer, as well as outbreaks and irritation (particularly for those with already sensitive skin).
